LG Velvet: A good phone with a curious accessory

A case gives this device another screen, if you're keen on dual-tasking

MALA BHARGAVA

I have been obsessed with the idea of more than one screen on a phone for many years now. Quite recently, it has come out with two phones that double the screen power in totally out-of-the-box ways. One of these is the LG Wing, that has a never-before-seen swivelling second display; and the other is the LG Velvet, which has an accessory that gives it a second screen. LG has done this before with its G8x and some other devices, and now here's the same format again on the LG Velvet.

The LG Velvet is a nice enough Android phone by itself. Design-wise, it's got a shiny reflective back that catches light prismatically. The colour we saw was Aurora Silver. If you like shiny things, you'll love it. It's a really tall and big phone — and with the case, quite heavy and clunky.

Twice the screen

The main screen is a 6.8-inch one. And it's a very nice 1,800x2,460 pixels P-OLED display. No special refresh rate or anything, but just a nice display. It has a dated-looking notch instead of the punch hole that's more popular now. The bezels on this display are not exactly negligible, but they're certainly doable.

The sides of the screen are prominently curved, which looks nice, but can make it difficult when you need to type something.

The specific tucked into the side — like the menu that's part of the interface. But now, here's where things get interesting. If you opt for its accessory, this phone gets an entire second screen. This comes about via a hard plastic flip case where the phone itself

fits on the right side, and the second screen on the left. Between the two is obviously just the spine of the case itself. With this second display, you're able to open up two apps and view them full-screen side by side. I couldn't find a way to use the split screen on top of that, or one would have been able to open up several apps and probably have a brain implosion with all the multi-tasking. Strictly speaking, there's a third screen around: that's a small windowed display on the cover to show the time and other info when the case is shut.

Not really in tandem

With all the implementations we've seen recently in terms of folding phones, it's interesting to see one that just sticks two screens together without actually developing the software to enable them to work in tandem. You can opt to turn off the left display and focus on one thing — and save some of the battery — but then you won't get any interested curious glances. There's a menu for you to swap the screens or turn off one or the other.

There is a bit of customising for two screens, but it's really minimal. So, if you open up two versions of an app like YouTube, it will switch off from one screen. If you use LG's game controller, some games can be played with one screen becoming the controller and the other the display. I didn't locate a way of making one screen a keyboard, else that could have been interesting. The two screens don't meet in the middle as one — they're really are and feel separate. There are also some strange choices for the left screen. It does let you use a camera, but

located on the right side. Even so, the left screen has a notch, perhaps just for aesthetics and symmetry. The cameras are a 48MP primary, an 8MP wide angle and a 5MP depth. The front camera is a 16MP. They perform adequately, subduing colours at times and not doing too much for low light photography but in other ways average good. This phone's specs in India include a Snapdragon 845 which, while an older processor, is still a flagship one and good enough for most things. There's 6GB of RAM and 128GB of storage with expansion possible via SD card.

While this is an interesting phone and unique in its two-screen style, LG has had a long time to iron out problems that could have taken the format much further.

Price: ₹36,990; ₹49,990 with accessory.
Pros: Unique accessory for a two-screen experience, decent specs, retains extras like the headphone jack and memory card slot, smooth performance, old but still powerful chip, great screens, sturdy solid build.
Cons: Heavy, trying to hold, software doesn't leverage two screens enough because they're separate, some baffling ergonomic choices

iPhone 12: All set to be the most popular of the line-up

Not too big, not too small; has all the essentials; and is better priced than the Pro models

MALA BHARGAVA

There probably have never been quite so many iPhones to choose from as there are today, to the point where it can be dizzyingly confusing as to which one to buy. Not only did Apple launch four iPhone 12 models at a go a couple of months ago, many of the previous generation models are also very much around. While I wouldn't recommend going back too many generations, because software support only lasts a few years, the series 11 phones are still very much worth it — especially the iPhone 11, which has been Apple's most popular phone all of the first half of 2020. Today we're looking at the direct successor to that phone, the iPhone 12 (regular), which could be the obvious choice for many Apple fans.

The iPhone 12 is about the same size as the iPhone 12 Pro, but both these models are flanked on either side by uniquely-sized ones. At one end is the iPhone 12 Mini, a very cute and myself holdable phone that many will love — and many will find a little too small. At the other end, there's the outsized iPhone 12 Pro Max, which is like half a tablet and great for both creating and consuming content but too big for many to handle. The iPhone 12 starts out at ₹79,999 against its nearest sibling, the 12 Pro, which is ₹119,900 — quite a difference.

The size of the iPhone 12 is

what users are accustomed to seeing with the phones around them. The phone comes in black, white, blue, green, and (Product) red, as it's been branded. Apple has gone back to the flat clean-lined design that was so loved. Except for the corners, there's no roundedness. While this can make the edges a little hard against your palms, there's very little likelihood that you'll use this phone without a case. It's actually narrower and smaller than previously, while fitting in more screen.

The glossy back seems to take on fingerprints almost before you even touch it. With the back unit to play with, I found myself spending a fair bit of time wiping the phone off. But even with finger smudges, the iPhone manages to look premium and classy because I guess it's the iPhone that actually set the standard for premium to begin with. And with all that gloss and glass and 'surgical grade' aluminium, it can't help but look what it costs. It's supposed to be protected by

what Apple calls a 'Ceramic Shield' — points for coming up with fancy branding for every component — which apparently makes it shatter-proof. Some reviewers do, however, report scratches. The iPhone 12 is IP68 water resistant.

The iPhone 12's screen is an OLED this time, just like the others in this series. That's one big upgrade over the iPhone 11 collection. It looks good, though my contention is that it always did. The big prominent notch is conspicuous by its presence, underlining the fact that the iPhone is just about the only new phone that has a notch of that kind now. It means you get the LiDAR scanner and the true depth camera though.

The big upgrade The ever big upgrade is the step-up in the processor, which is now an A14 chip that makes it more of the fastest in the world. In tests, the newest OnePlus may be faster at some tasks, with twice the RAM, but the iPhone's polished smoothness is difficult to match. The phone handles heavy-duty tasks easily. It's also a 5G-ready phone, should the connectivity become miraculously available. The storage variants available for the iPhone 12 are 64GB (truly too low for a base model today), 128GB and 256GB. Each sees quite a jump in price.

Although it's the Pro phones that have additional camera features, the iPhone 12 (and Mini) don't have low-end cameras by any means. It's just that there are no telephoto lenses but the regular 12MP is a wide angle lens with an f/1.6 aperture, and it's accompanied by a 12MP ultra wide with an f/2.4 aperture. Tap the on-screen zoom-out to get a 120-degree viewing angle with relatively little distortion. You also get all of Apple's fancy camera tech: Portrait mode, Night mode, Deep Fusion, Smart HDR 3, Dolby Vision HDR video recording up to 4K at 30 fps and 4K video up to 60 fps with extended dynamic range. Photographs are excellent with great dynamic range. There's optical image stabilisation and the superlative video that iPhones have become the best at. The front camera is a 12MP as well, with an f/2.2 aperture. If the iPhone 11 is anything to go by, the iPhone 12 should be a sell-out as well. With the camera being the one big differentiator, and of course the finish on the back, the mid-styled iPhone 12 is going to be the best choice for those who don't want a big step-change in price to the next level model.

Price: ₹79,900; ₹84,900; ₹94,900
Pros: Premium as can be, now in a flat popular as the others in series, excellent cameras, colours and storage variants for choice, brilliant OLED screen, great sound, good battery life and fast charging.
Cons: More expensive than last year with no revolutionary change, retains the ugly notch, some earphones omitted from package now, stinky base storage, glossy back shows smudges and scratches

LG Spree Hospitality strengthens direct-to-consumer play among its top five focus markets

Premium streaming service lists India among its top five focus markets

MEENAKSHI VERMA AMBANI

New Delhi, December 2

Premium streaming service Lionsgate Play, which entered India last year in collaboration with telcos, is now strengthening its direct-to-consumer play with the launch of its independent app in the country.

Rohit Jain, MD, Lionsgate South Asia, told BusinessLine that outside the US, India is among the top five focus markets for the streaming service. "Due to the pandemic, in the past 840 months, there has been an accelerated adoption of digital and SVOD services in the country. This led us to fast-track our plans for the B2C launch in India. We also believe the Indian OTT market is in the early stages of high growth. We expect to see a massive surge in terms of OTT subscriptions in the next 4-5 years in India and we aim to garner a substantial market share in the segment."

The OTT app from the American-Canadian studio Lionsgate and its group company Starz, is ramping up its distribution in India and will now be widely available across Google Play store, Apple app store, Amazon firestick and Smart TVs. As per PwC estimates, India is currently the world's fastest growing OTT market and will become the sixth largest globally by 2024.

Strong growth Jeffrey A. Hirsch, President and Chief Executive Officer, Starz, said the company expects to see continued strong growth as it enters the Indian OTT ecosystem and it aims to have 15-20 million international OTT subscribers by 2025. Besides India, this month, the company is expanding its global footprint across 55 countries throughout Europe, Latin America, Canada and Japan. "We believe our offering with edgy and critically acclaimed

tent slate to premiere movies such as *Hustlers*, Gerald Butler's action thriller *Angel Has Fallen*, the fantasy thriller *Hellboy*, and the action comedy *The Gentlemen*, among others. It will also offer original series such as *Love Life*, *No Man's Land* and *The Goes Wrong Show*."

"Unlike some other OTT players that focus on a mass audience, our key target audience is young adults and urban millennial subscribers. Also, our content strategy is fairly differentiated and we put a lot of focus on offering curated content across a wide variety of genres," Jain said.

Lionsgate Play is also stepping up its focus on Indian original content. "We will be launching Indian originals in the coming months, and we are working with the best creative minds in the industry. Our strategy is to focus on content that breaks the barriers of geography and language and hence we focus on making original content that can resonate with audiences across markets."

Spree Hospitality set to open 8 new hotels by March

SANGEETHA CHENGAPPA

Bengaluru, December 2

In a pandemic-hit year, Spree Hospitality, a mid-market, hospitality management operator, has set to open eight new hotels with 338 keys by March 2021 and has hired over 250 additional staff to support this expansion, a top executive told BusinessLine. Founded in 2010 by Keshav Baljee, who is co-promoter of his family business Royal Orchid Hotels, Spree Hospitality has an established footprint of 308 operational keys across seven hotels in Bengaluru, Pune, Goa, Chennai, Kochi, Coimbatore and Delhi. "Covid has caused a huge disruption in the industry as a result of which single property owner-operators across the

country are now seeking the way of working with a professional brand like Spree. Moreover, there are several mid-market and budget hotels being built but with limited expertise to run them efficiently and sustainably. We partner with developers in the long term, to run these hotels. We are opening 8 new hotels before March 2021 and have signed hotels in loca-

tions like Manali, Haridwar, Dehradun and Goa which are beneficiaries of the domestic tourism boom that is happening especially for cities that are driving distances away from key metros," said Keshav Baljee, Managing Director, Spree Hospitality. Investment While the company has made value investments in headcount for the corporate office, regional sales, force and technology, to manage this expansion, the investments are made by the hotel owners, estimated at ₹120 crore. Elaborating on the benefits of partnering with Spree, Baljee said, "occupancy rates of the hotels which sign up with us typically increase to our group aver-

age occupancy of 75 per cent for business hotels and 65-70 per cent for leisure properties. With enhanced quality of service, room rates have increased by varying rates ranging from 20-50 per cent. We have delivered better food and beverage performance by approximately 25 per cent in the properties that we manage, decreased staff turnover and greatly improved staff quality." As of December 2019, the country had 61,100 rooms in the mid-market segment including 35 star and 4 star hotels, growing at 6.7 per cent annually. And the supply pipeline for the segment was pegged at 25,200 rooms up to 2024, as per estimates from hospitality consulting firm Hotelista.

49 chemical products brought under 8-digit HSN classification

KR SRINIVAS

New Delhi, December 2

The Central Board of Indirect Taxes and Customs (CBIC) has mandated eight-digit HSN classification for 49 chemical-based products for mention at the time of issuing GST invoices.

This move is expected to avoid classification disputes and reduce tax leakages, say tax experts. Industry will now have to make changes in its Enterprise Resource Planning (ERP) platforms to move from current two-four-digit level, they added. HSN — the Harmonised Commodity Description and Coding System — is a multipurpose international product nomenclature developed by the World Customs Organisation.

Some of the products that are part of the 49 chemicals list include cyanogen chloride; hydrogen cyanide; phosphorus trichloride; trimethyl phosphite; sulfur dichloride; triethanolamine.

Pratik Jain, Tax Partner, PwC India told BusinessLine that the government may want to monitor the data to check tax leakages either by wrong classification or other means, based on specific intelligence.

Abhishek Jain, Tax Partner, EY said: "The CBIC has mandated eight-digit HSN classification for 49 chemical based products, to be mentioned at the time of issuing GST invoice, which was currently placed at two/four digits depending upon turnover."

"Pursuant to this notification, the industry players dealing in these goods will have to undertake HSN classification at eight-digit level for their products along with requisite ERP changes."
